BARONESS Aggression Cutting Technology

**BARONESS**  
Quality on Demand

The cutting performance of the reel mower changes greatly depending on the positional relationship between the reel cutter and the bedknife. The bedknife blade attitude and the distance of the bedknife from the reel centerline defines the stance, Aggressive or Less Aggressive.

Baroness reel mowers are equipped with an adjustment mechanism to achieve variable mowing performances at the same HOC setting. We call this, **B-ACT**.

All around the world golf courses deal with many different conditions and turf. On every golf course, superintendents and members have individual ideas of what the ideal green and ideal turf conditions are. Therefore, BARONESS provides options to customize an optimal cutting performance for every customers' needs and wants with **B-ACT**.

## BARONESS' philosophy

The Baroness standard is based on an aggressive cutting stance that provides the best cut for the lawn. Cutting with an aggressive stance positions the grass vertically when cutting (shearing), reducing the growth of variable and larger grass leaves, while promoting healthy new shoots of grass that are more uniformed in leaf size.

A less aggressive stance can be beneficial when turf conditions are softer and the grass is not tightly compacted. In such cases a less aggressive stance can help protect the appearance of your lawn.

However cutting only with the less aggressive stance, does not allow your lawn to reach its optimal condition.

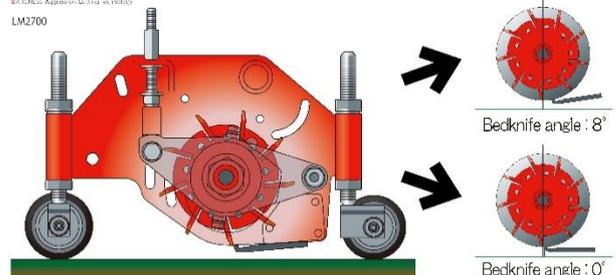

Aggressive? Less Aggressive?

Before cutting any grass, you should always check the conditions of the turf and adjust your cutting stance to better fit your needs. Baroness' goal is to assist in creating the best turf and playing conditions possible.

BARONESS believes that a beautiful, healthy green with a true ball roll and good surface is created from conditions; where the grass is tightly compacted, the number of grass shoots is just right, and the shoots grow evenly and straight up.
